REPLY

Subject problem has been discussed at length with [REDACTED] and they are extremely desirous of correcting the deficiency, especially so, since a [REDACTED] stop-payment order is outstanding until the matter is resolved. Two heads (DIA and PAG) were sent back to [REDACTED] on 25 January 1966 together with all the objectives and eyepieces required in order to investigate the problem. Subsequent conversations with [REDACTED] indicate that a new field lens in each optical train will probably correct the situation. However, to date two different field lenses have been installed and have not solved the problem. A third type is currently being tried. As soon as the problem is resolved and the new type reticules also installed on the heads now at [REDACTED] they will be returned for evaluation prior to any further action on the remaining four heads.
